

Project Initialization and Planning Phase

Date	09 July 2026
Team ID	SWTID-2026-5556
Project Title	Credit Card Approval Prediction
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report The proposed project aims to automate the credit card approval process using Machine Learning. The system analyzes applicant information such as income, employment status, credit history, and other financial details

Project Overview	
Objective	To develop a Machine Learning-based system that accurately predicts credit card approval decisions using applicant data.
Scope	The system allows users to submit application details, processes the data using a trained ML model, and instantly displays the approval prediction.
Problem Statement	
Description	Traditional credit card approval is time-consuming and relies on manual verification, which can lead to delays and inconsistent decisions.
Impact	Manual processing increases workload, slows approval time, and may reduce customer satisfaction
Proposed Solution	
Approach	Develop a Flask web application integrated with a Machine Learning model that predicts credit card approval based on applicant information.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Processor	Intel Core i5 or higher
Memory	RAM	8 GB
Storage	SSD	256 GB or above
Software		
Frameworks	Web Framework	Flask
Libraries	ML Libraries	Pandas, NumPy, Scikit-learn, Joblib
Development Environment	IDE	Visual Studio Code / Jupyter Notebook
Data		
Data	Credit Card Applicant Dataset	Kaggle Credit Card Approval Dataset (CSV)
